Application:
1982-2003 Chevrolet S-10 (2WD)
1982-2003 GMC S-15 (2WD)

Save $20.00 when purchasing upper & lower A-arms as a kit!

Increase handling and make your vehicle feel like a modern day muscle car with a set of new front A-arms from UMI Performance. UMI Performance A-Arm kit is shipped fully assembled and ready for installation. The lower A-Arms feature greaseable polyurethane bushings for ride comfort while the upper A-Arms are assembled with low deflection UMI designed delrin bushings and chromoly billet cross shafts. Delrin bushings and cross shafts are designed and machined exclusively by UMI Performance. The high wear resistance delrin bushings feature machined grease passages on the inside and outside diameter to allow proper grease flow for a quiet low friction operation. The supplied cross shafts are machined from chromoly steel to tight tolerances for a low friction pivot inside the delrin bushing. Both upper and lower A-Arms feature premium ball joints installed (upper ball joints optional below) and polyurethane bump stops to limit suspension travel. UMI A-Arms are fabricated from drawn over mandrel tubing with CNC machined tube ends for a precision and accurate fit. They are assembled on a jig to maintain accuracy for a perfect fit every time. All critical areas are TIG welded for superior strength and a clean look. Lower A-Arms feature additional tire clearance while the upper A-Arms offer a relocated ball joint mount for additional caster and improved ball joint angle for lowered vehicles. UMI's extensive testing on the street, drag strip and skid pad ensures a quality product able to with stand all types of conditions. The ultra tough red or black powder coat finish guarantees your performance parts stay beautiful on your street car, drag car or pro touring machine. A-Arm kit will work with factory springs, lowering springs and coil over kits such as the popular QA1 coil over set up. For the best handling and tire life from the UMI designed A-Arms included with each kit are recommended alignment specs along with detailed installation instructions.

Hardware kit, Part # 3802- Complete A-arm hardware kit includes Grade 10.9 bolts, washers and nylon lock nuts. Kit includes everything needed to mount your new UMI Performance A-arms to your vehicle.

Features:

*Additional caster added for modern day alignment
*Robust tubular design with machined gussets
*CNC machined ball joint holders & tubing radiuses
*Precision bent on a programmable tube bender
*4140 chromoly cross shafts, CNC machined & zinc plated
*Upper A-Arms assembled with UMI designed delrin bushings
*TIG welded for superior strength and clean looks
*New premium ball joints installed
*Polyurethane bump stops included
*Jig built for accuracy & precision fit
*Durable glossy powder coat finish
*Direct fit, no modifications needed
*Designed & manufactured in Pennsylvania USA
